TURNING VISIONS INTO REALITY

Ulstein Group was established in 1917, and has been family-owned since the beginning. Gunvor Ulstein and Tore Ulstein represent the third generation through their roles as, respectively, Head of the Board of the mother company Ulsmo and Head of the Board of Ulstein Group .

"Ulstein is a global and innovative supplier within maritime operations. We provide cost-effective, safe and reliable products and services to players who think holistically and long-term. Our solutions support shipowners, operators and contractors to obtain lasting competitiveness in their marine operations.

Gunvor Ulstein
CEO - Ulstein Group

We are known for being thorough and reliable, and for delivering quality. Ulstein is a long-term partner, continuously aiming to secure future competitiveness and sustainable growth. With zeal and creative enthusiasm, we are turning visions into reality together with our customers."

Tore Ulstein
Chair of the Board - Ulstein Group

TAILOR-MADE SOLUTIONS

We specialize in delivering optimal designs and constructing ships at the shipyard preferred by our clients. We can provide comprehensive support with delivery of detailed engineering, power systems, IAS, PMS, EMS, and other essential services agreed upon with the client and yard to ensure the best possible end result.

DESIGN & SYSTEMS

Ship designs developed to customer needs

Calculations

Define capacities to fulfil demands

Basic & detailed engineering

Integration design

LOCAL SITE TEAM

Local team present to follow up deliveries

Pre-check on system & equipment prior to commissioning

Commissioning

ACTIVE FOLLOW-UP

Participating in inclining test, delivery of updated stability documentation

Participating in sea trial to follow up our deliveries

Lifetime service

“ We decided to partner up with Ulstein due to their hull and the technical design, as well as their site team in China to supervise the production.

Niels-Erik Lund, President/CEO SunStone Ships

How can we
help you?

SMARTER, SAFER, GREENER

Design and system solutions developed for smarter, safer, and greener operations. Every feature elevates the experience for both passengers and crew, while delivering strong and lasting returns on investment.

Data analysis

Operate your ship smarter and more efficiently by analysing the ship's data by using Ulstein Blue Box. Optimised operations lead to reduced fuel consumption and emissions.

X-BOW®

The X-BOW® hull reduces spray, noise, vibrations and slamming, leading to increased speed, comfort and reduced fuel consumption. You will stay protected with magnificent viewing spots.

Comfort and safety

Going outside the beaten track? We are specialists in designing solutions for rough weather. With our ships, the polar areas are within reach comfortably and safely.

Energy economy

Several systems can help save and utilise energy on board, such as heat pump technology, exhaust gas economisers and waste heat recovery.

ENHANCED PASSENGER EXPERIENCE

Ulstein's cruise ships provide a smooth and comfortable ride, even in rough seas, thanks to the X-BOW® design and zero-speed stabilisers. Passengers even report reduced seasickness. Minimal noise and vibrations ensure a peaceful onboard environment.

The spacious X-BOW shape allows for exciting recreational opportunities, such as bow and underwater lounges and explorer wings, offering spectacular views and a closer connection to nature.

HYBRID POWERED

Think smart and think green: Hybrid power enables you to reduce fuel consumption and emissions. This allows for completely emission-free periods.

Hybrid power can be a combination of several power sources, including batteries, methanol and hydrogen.

**Prepared for future
LOHC storage tanks**

**Battery energy storage
system installed**

**Dual fuel engines,
MDO and Methanol**

Space for future fuel cells -
methanol or hydrogen

Space for two
hydrogen containers

Methanol storage tanks
and fuel treatment unit

PORTFOLIO SELECTION

CX104 - 'National Geographic Resolution'

CX104 - 'National Geographic Endurance'

"With this vessel, Ulstein allows us to go to places we have not been able to go before. At delivery this vessel will have the highest ice class of any purpose-built passenger vessel. This allows us to spend more time in polar regions. This is truly a remarkable ship, and I am so proud as we take this next step in expedition travel."

Sven Olof Lindblad, President/CEO Lindblad Expeditions

CX103 - 'Ocean Victory'

CX103 - 'Greg Mortimer'

"It was of utmost importance that we developed an expedition cruise vessel of high quality and with proven design and technology. Ulstein has designed more than 105 vessels with the X-BOW® design. These hulls have been developed for rough weather, high comfort and great fuel efficiency."

Niels-Erik Lund, President/CEO SunStone Ships

FEEDBACK

CX104 - 'Resolution'

“The possibilities these ships provide are truly beyond what I thought possible. The comfort that the X-BOW provides is just incredible. I have not had a single bow slam the entire season! Every single trip has led to the absolute highest guest satisfaction. Ice capabilities are outstanding, but also the service speed which allows for so many additional experiences: We may offer a cruise south of the circle AND to the Weddell Sea – unheard of!”

Martin Graser, Master 'National Geographic Resolution'

CX103 - 'Ocean Victory'

“Lowest carbon emissions per passenger in the Expedition Cruise industry!”

“We are proud of the combination that has provided us this incredible result; the clean Tier 3 compliant engines, the efficiencies of the revolutionary X-BOW and the compact design that comfortably fits 185 guests in just 104 metres”

President Albatros Expeditions

LIFE CYCLE SERVICES

In Ulstein, we are dedicated to work for a more sustainable future. Together with our customers and partners we are developing designs and solutions to reduce the strain on the natural environment.

We search for safer, smarter and greener ship solutions with life-cycle environmental impact always in mind.

Upgrade, retrofits and conversions

Updates, renewals, upgrading to new technologies and features.

Maintenance, repair and life extensions

Preventive upkeep of ship systems, correct defaults, keep vessels in operation.

Surveys, dockings and repair

Class surveys, inspections, and repairs in roofed and open-air dry docks as well as quay-side at our own yard.

Engineering consultancy and digital services

Engineering, calculations, analyses, simulations.
